Summary

Software engineer, full-time since Feb 2025 after a year of R&D and thesis work at Ericsson, building backend services and APIs in Python (FastAPI) and C#/.NET 6, with React/TypeScript front-end work, deployed on Azure with Docker and CI/CD. Built document-processing microservices and EcoPRISM ESG platform features. MSc in Computer Science (BTH). Tests REST APIs with Postman, REST Assured and Apidog, with automated checks running in CI/CD.

Skills

Programming: Python, C#, TypeScript, JavaScript, SQL, Java
Backend: FastAPI, .NET 6, Node.js/Express, Django, REST APIs, microservices, PostgreSQL
Front end: React, TypeScript, HTML/CSS
API testing & QA: Postman, REST Assured, Apidog, pytest, request/response validation, automated tests in CI/CD pipelines
Cloud & DevOps: Azure (Functions, Blob Storage, Entra ID, Cognitive Search), AWS (EC2, CloudWatch, auto-scaling), Docker, CI/CD, Azure DevOps, Git/GitHub, Linux
Practices: Code review, software testing, Agile/Scrum, security best practices
Also: LLM integration (Azure OpenAI, LangGraph), Pandas, scikit-learn
Languages: English; Swedish (beginner, self-study)

Experience

Machine Learning Engineer & Developer Feb 2025 – Present
Beta Bridge Ventures AB *Stockholm*

- Designed and shipped REST APIs in FastAPI and .NET 6 that serve ML inference to React/TypeScript front ends, built to security best practices.
- Built and maintained full-stack features on EcoPRISM, an ESG analytics platform (GHG Scopes 1/2/3) from Beta Bridge's sister company: FastAPI and .NET 6 back ends, React components, Azure Functions, Blob Storage and Cognitive Search.
- Developed a Python document-ingestion microservice handling PDF, Word, Excel and HTML with OCR fallback, deployed on scalable Azure infrastructure.
- Integrated an LLM-backed knowledge assistant (Azure OpenAI, LangGraph) into the product through tool-calling endpoints, including ticket creation, replacing a sequential multi-agent flow; requests are traced, with guardrails and token/cost limits.
- Worked in Scrum squads on Azure DevOps; enforced code review standards and CI/CD pipelines through Git/GitHub.

Summer Internship, R&D Jun 2024 – Jan 2025
Ericsson AB *Lund*

- Rewrote a roughly 1,900-line Tcl/Tk FPGA build script as a Python library that automates the custom build flow end to end; later projects reused it as the base for their own build scripts.
- Optimised the dpd-configuration parser library for performance and reliability in internal data pipelines.
- Built a real-time frequency-domain visualisation tool and a Streamlit app that automated Excel data handling.

Master Thesis Intern Jan 2024 – Jun 2024
Ericsson AB, Microwave Test *Göteborg*

- Built Python tooling on the JIRA API for large-scale data extraction and reporting, and used it to train time-series forecasting models for Trouble Report prediction across the MINILINK 66 portfolio.

Projects

Busskoll, live Stockholm bus-arrival prediction | *Python, FastAPI, React, TypeScript* busskoll-pearl.vercel.app | source

- Live FastAPI service on Vercel over SL's real-time GTFS-RT feed, kept inside a 30k-calls/month quota with server-side throttling and 90 s CDN caching; a React/TypeScript live map (MapLibre) on a typed API client.
- Its model is 23% more accurate than SL's own arrival predictions on GPS-measured arrivals, served without an ML runtime (trees exported to NumPy); a daily GitHub Action rebuilds the timetable and redeploys.

Elvarsel, Nordic electricity-price forecasting | *Python, FastAPI, Postgres, React, TypeScript* elvarsel.vercel.app | source

- Deployed on Vercel: read-only FastAPI service for 12 Nordic bidding zones, React/TypeScript dashboard, Postgres (Supabase) and a daily ingest-retrain-forecast GitHub Action; CI runs ruff and pytest on every PR.
- One LightGBM model beats the naive baseline in every zone (15–42% lower MAE, 52-week backtest); forecasts are scored against actuals.

Platsjakt, AI job-application co-pilot | *Python, Claude API, SMTP* platsjakt.vercel.app

- CLI on the Arbetsförmedlingen JobSearch API that ranks roles with an LLM and drafts a tailored resume per role, with human review and limits enforced in code.
- Scheduled daily email digest (SMTP, Windows Task Scheduler) at about $5/month running cost; wrote architecture decision records for a phased move to a multi-user Azure web app.

Education

MSc Computer Science 2022 – 2024
Blekinge Institute of Technology

- Relevant courses: Software Security, Software Testing, Cloud Computing, Artificial Intelligence

B.Tech Computer Science & Engineering (dual degree) 2018 – 2022
JNTU, India and Blekinge Institute of Technology, Sweden
